- ✓ **Establish Instant Credibility**
- ✓ **Retain Patients Long After Relief**

**Would You Invest \$173 per Month to Double
Your Income This Year? Ask us how!**

"In twelve years of use, I have been impressed with the reproducibility and reliability of the MyoVision system. The software is extremely user-friendly and reliable. It has proven itself in the medical-legal arena without question, making it one of the most desirable instruments for the clinician needing objective data to support their clinical evaluations. It significantly augments range of motion data by providing objective assessment of effort. Product support is superb. I highly recommend it without reservation."

Dr. John J. Gerhardt AMA Expert on Disability Evaluation

"Our technology review committee reviewed MyoVision and found it to be the finest product of its type, and we, the ICA endorse the MyoVision without reservation."

John Maltby, DC
President International Chiropractors Association"

"Recipient of the prestigious "Preferred Vendor Status" afforded to only two products"

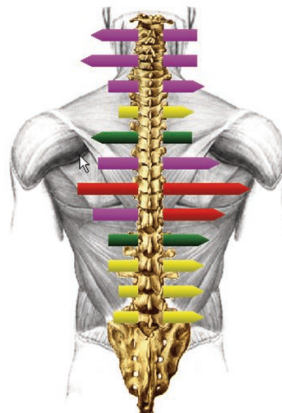

ACA Council on Therapeutics and Rehabilitation

"Finally, research validates MyoVision's Dynamic sEMG, which sets the industry standard for technology. This development makes it the perfect tool for tracking progress, documenting clinical effectiveness and adds a unique dimension to the Activator Methods analysis and adjustment."

Dr. Arlan W. Fuhr
CEO/Founder Activator Methods International

The Importance of Standing Tests

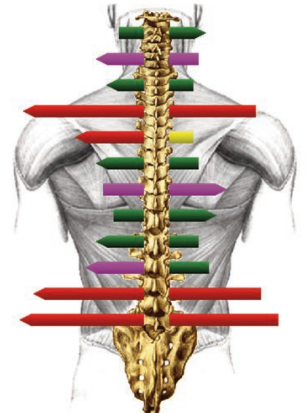

COMPETITOR'S: SEATED TEST

MyoVision's standing test elicits abnormal muscle activity due to proper loading.

The same patient seated, does not show issues with lumbar and upper thoracic spine

The outdated, seated test does not load the patient like a standing test, it is not supported by research and is more of an ergonomic study of the chair than of the patient.

MYOVISION'S: STANDING TEST

- ✓ **Greater clinical accuracy**
- ✓ **Correlates with X-Rays**
- ✓ **Greater visibility when screening**

MyoVision is the only system optimized for standing sEMG tests.
